Poplar Bluff, Missouri – Schultz Surveying and Engineering, Inc. (SSE) was chosen by Associated Electric Cooperative, Inc. (AECI) to perform surveying services on over 700 acres of land near their New Madrid Power Plant location.

The land was purchased by AECI in 2012 to construct a railroad spur from the main Burlington Northern line west of Highway 61 to the Cotton Belt line running to their power plant. The property no longer needed for the project is being auctioned off by AECI on July 12th. Before selling the property AECI knew they would need to provide accurate legal descriptions and maps for the real estate transaction.

The survey included 8 tracts of land comprising just over 700 acres in southeast Missouri along the Mississippi River. SSE owner Stan Schultz stated, "As a rural resident I love working with our cooperatives and AECI is a great group to work for. We have also helped Sho-Me Power, Clay County Electric, Black River Electric and several other cooperatives before. Having a staff that understands what it takes to produce and deliver electricity to rural Missourians makes working for our electrical cooperatives very enjoyable."

Don Berry, R.L.S. of SSE concluded ‘The survey and subsequent plats, as well as the full-color aerial map we provided were a bit above the routine, but because this property was being auctioned off we knew the potential buyers would want a good view of what they were bidding on. I always enjoy working for AECl because their folks are so professional and Mr. Murray gave very clear instructions.”

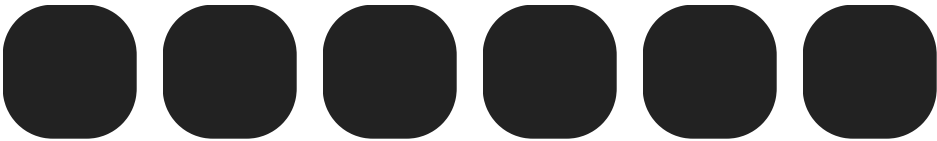

Schultz Surveying and Engineering is a Missouri based civil engineering company with offices in Poplar Bluff, Branson, Lake Ozark and Doniphan. They have provided surveying and GIS services to a variety of utility clients including city owned electric utilities, rural electric cooperatives, and for-profit utilities such as AMEREN UE.

Additionally, they have done small, medium and large survey projects for MoDOT, the USACE, and many cities, large corporations, small businesses, and private individuals. To learn more about their services please visit www.schultzengineering.com
