[Top harvest counties: Howell with 249 deer harvested, Franklin with 215, and Oregon with 214.](#)

Jefferson City, Missouri - Preliminary data from the Missouri Department of Conservation (MDC) shows that deer hunters in Missouri harvested 10,025 deer during the alternative-methods portion of the fall firearms deer season, which ran Dec. 23 - Jan. 2. Of the total harvest, 2,827 were antlered bucks, 1,312 button bucks, and 5,886 does.

Top harvest counties were Howell with 249 deer harvested, Franklin with 215, and Oregon with 214.

The harvest total for last year's alternative-methods portion was 10,602 consisting of 2,787 antlered bucks, 1,496 button bucks, and 6,319 does.

Deer hunting continues for this season with statewide archery hunting through Jan. 15.

MDC Issues Forest Health Alert for Emerald Ash Borer

FEBRUARY 22ND 2018 BY DEE LOFLIN

[MDC Issues Forest Health Alert for Emerald Ash Borer](#)

[MDC issues forest health alert for Emerald Ash Borer](#)
[Tree-killing pest has spread to 42 Missouri counties, suspected in more locations.](#)

Missouri - Forest health professionals with the Missouri Department of Conservation (MDC) advise Missourians to watch for damage from an invasive tree pest in winter months. The Emerald Ash Borer (EAB) is a small, metallic green beetle native to Asia that attacks and kills ash trees.

EAB attacks all species of ash trees, and kills nearly every tree it infests. At approximately a half-inch long, the green adult beetle feeds on leaves and does very little damage to trees. However, in its larval stage, the insect kills ash trees by feeding on the water- and nutrient-conducting tissues just under the bark.

The destructive insect has been confirmed in 42 Missouri counties, as well as the City of St. Louis, and is suspected to be present in several more locations.

MDC encourages Missourians to watch for signs of this invasive pest during winter months. While birding, watching wildlife, hiking, or enjoying other outdoor pursuits this winter, keep an eye out for bark blanding on ash trees. Bark blanding is caused by woodpeckers removing a tree’s outer bark while searching for insect larvae. On ash trees, this feeding activity reveals a white inner bark that is highly noticeable. Ash trees with bark blanding may not have EAB, but it is certainly worth reporting these trees for a closer look by trained foresters.

“EAB is estimated to cost Missourians more than \$180-million in tree treatments, removals, and replacements over the next 20 years,” said MDC Forest Entomologist Robbie Doerhoff. “If you have a healthy, high-value ash tree in your yard, it can be treated with insecticides that will protect it from EAB. However, these treatments can be expensive and must be applied every year or two to guarantee protection. For some ash trees, the best option is removal and replanting with a different species such as an oak native to Missouri.”

MDC encourages Missourians to help prevent the spread of this destructive pest by learning to identify signs of EAB and reporting possible infestations in counties where EAB has not yet been confirmed.

Winona Man Gigs State-Record Northern Hog Sucker

FEBRUARY 22ND 2018 BY DEE LOFLIN

Winona Man Gigs State-Record Northern Hog Sucker

Winona man gigs state-record northern hog sucker

MDC congratulates Richard Bradshaw on breaking the state record by gigging a 2-pound, 12-ounce northern hog sucker on the Current River.

Carter County, Missouri - The Missouri Department of Conservation (MDC) reports Richard Bradshaw of Winona became the most recent state-record-fish breaker in Missouri when he gigged a northern hog sucker on the Current River in Carter County. The new “alternative method” record fish caught by Bradshaw on Jan. 27 weighed 2 pounds, 12 ounces with a length of 18.6 inches. Bradshaw’s recent catch broke the previous state record by 4 ounces.

MDC staff verified the northern hog sucker’s weight on a certified scale in West Plains. This is the first state-record fish of 2018.

Missouri state-record fish are recognized in two categories: pole-and-line and alternative methods. Alternative methods include: throwlines, trotlines, limb lines, bank lines, jug lines, spearfishing, snagging, snaring, gigging, grabbing, archery, and atlatl.
